As we know that the entire world has been facing the challenges posed by the ongoing COVID-19 pandemic on different facets of the life like economic, social, political, etc. The entire global society has been quarantined indefinitely on account of the contagious, all pervasive and deadly nature of this pandemic. The whole world is engaged and obsessed in discovering treatment and solution round the clock to come out of this global disaster and paving the way for further development of the society. The foremost objective of the ongoing efforts and initiatives of the global community is to ensure the safe existence and survival of the human beings ahead.

This pandemic has victimized not only under-developed and developing nations but well developed nations also, however, it is very difficult for the under-developed and developing nations to address and handle the challenges posed by the COVID-19 pandemic as compared to the developed nations. As of now around one million people have died of coronavirus against over thirty million COVID-19 cases identified across the world. ## **1.3 Background**

The COVID-19 outbreak originated in Wuhan city, which is a major domestic and international transport hub. Given the large population movements, and the observed human to human transmission, it was expected that the virus would spread internationally. With the information currently available for the novel coronavirus, WHO advises that measures to limit the risk of exportation or importation of the disease should be implemented.

On January 7<sup>th</sup> 2020, Chinese authorities confirmed that they had identified a new virus, which is believed to have originated from Wuhan, China. The new virus is a coronavirus, which is a family of viruses that include the common cold, and viruses such as SARS (Severe Acute Respiratory Syndrome) and MERS (Middle East Respiratory Syndrome). This new virus was temporarily named as “2019-

nCov” As the virus has now spread globally, the connection with China is significant but becoming less important. Coronaviruses are zoonotic, meaning they are transmitted between animals and people. Symptoms can include fever, followed by a dry cough and then, after a week, leads to shortness of breath and some patients needing hospital treatment. Other symptoms can include sneezing, headaches, and possible kidney failure.

COVID-19 (also known as Coronavirus disease) is an infectious disease caused by Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2 commonly known as Coronavirus). The earliest cluster of related cases was reported in December 2019 from Wuhan, China. The most common symptoms include fever, dry cough and fatigue. Other symptoms include coughing up sputum, joint/body aches, loss of smell, sore throat and Diarrhea. Patients who are critically ill develop respiratory issues. The disease can spread from person-to-person through small droplets from nose /mouth by way of coughing, sneezing and exhalation. World Health Organization (WHO) declared COVID-19 to be pandemic on 11 March 2020.

COVID-19 pandemic led by coronavirus originated from Hubei province of China [31<sup>st</sup> December 2019] and today it has spread to almost every nook and corner of the world. It has taken the form of deadliest pandemic of the twenty first century across the globe. As of now total identified COVID-19 cases have increased to over thirty million and its death toll has reached to around one million across the whole world. As of now total COVID cases identified only in India increased to around six million whereas its death toll has reached to over ninety thousand. It has been consistently increasing with fast pace across the earth.

Till date, no medicine to treat the COVID-19 patient has been reached in the final phase of its development in the world. However, every country and national health agency is dedicatedly engaged in the development of COVID-19 medicine. Therefore, prevention and precaution seem to be only alternative to handle the COVID-19 challenges to current civilization. in such an unprecedented scenario led by COVID-19 pandemic, awareness programmes at the ground level matter a lot to preserve humanbeings against the danger of coronavirus.
