

**Course Structure
&
Syllabus of
Post Graduate Diploma in Geo-informatics**

**Department of Geography
Rajiv Gandhi University
Doimukh
Arunachal Pradesh**

Objective:

Application of Geoinformatics is spread over a large spectrum domain viz. cartography, geodesy, navigation, spatial analysis, web mapping, conservation & rational use of resources, disaster management; emerging areas like climate change modeling, decision support system, there is a growing demand for skilled human resource in this field. The objective of the course is to provide theoretical knowledge as well as hand-on training to students for various applications in Remote-Sensing (RS), GIS, Computer-Aided Cartography (CAC) and Computer Aided Photogrammetry and skills towards professional digital analysis of geo-spatial data.

Duration

1. The duration of the course is for one academic year spread over two semesters.
2. This course will follow Academic Calendar of Rajiv Gandhi University.

Seats

Ten (10). Paid Course and open to all categories on merit basis¹.

Admission/Eligibility

1. Candidates for admission to the Post Graduate Diploma in Geo-informatics shall be required to have passed M. A. /M. Sc. in Physics, Mathematics, Applied Mathematics, Statistics, Geology, Oceanography, Geography, Urban & Regional Planning, any Natural/ Environmental Sciences OR B.E./B. Tech. in Civil Engineering, Electrical Engineering, Computer Sc. Agriculture Eng. Urban & Regional Planning **OR** B.Sc. (4Years) Agriculture / Forestry.
2. Candidates should have stereoscopic normal vision.
3. Candidates having a minimum of 55% marks at graduate and postgraduate level will be eligible for the course and admission will be made on the merit basis which will be based on the scheme adopted by the University for Admission.
4. The applicants should possess basic computer proficiency with good working knowledge of Microsoft office.
5. Students of reserved category will be given relaxation in percentage as per university rules.

¹ University authority may decide on reservation policy.

Fee:

1. Fee for this One Year Diploma Course will be charged from students at the time of admission with Annual Charges and Semester Charges for I Semester. II Semester fees will be charged during entry to II Semester as per the Rajiv Gandhi University norms.
2. Besides these normal charges, candidates will have to pay a onetime fee of `20000.00² (twenty thousand) as technical course fee at the time of admission to the course.

Examination and Result

1. The course work of the Diploma in Remote Sensing and Geographic Information System shall be in accordance with the scheme of examinations and prescribed syllabus.
 - a. Sessional and End-Semester division shall be 20% and 80%. (both for Theory and Practical)
 - b. Sessional shall constitute of average of three internal tests. (Two tests for theory and one test for practical)
 - c. End-Semester theory part examination shall be on the basis of unitary pattern.
 - d. End-Semester Practical part examination covering syllabus will be conducted by external examiner and internal examiner.
 - e. The Projects shall be evaluated (a) Progress evaluation (Internal) (20%) + (b) Project itself (50%) + (c) Viva-voce (30%) (a: by Internal; b & c by External)
2. The minimum attendance required by a candidate will be as per University Rules.
3. A candidate for a pass in Examination shall be required to obtain at least 50% marks in the aggregate of the papers prescribed for the examination and at least 40% marks in each theory and practical papers separately, provided that a candidate failing to secure at least 25% marks in any individual paper at the examination he/she shall be deemed to have failed at the examination notwithstanding having obtained the minimum percentage of marks required in the aggregate for the examination.
4. The candidate failed in one paper subject to a minimum of 25% will be allowed to continue and appear for examination in the failed subject in the next academic year.
5. Division shall be awarded in the Final examination as following:
 - a. First Division : 60% of Aggregate
 - b. Second Division/Pass: 50% of Aggregate

Evaluation:

Twenty (20) percent of the full marks in each course shall be evaluated on a continuous evaluation method consisting of test (three internal tests of 1 hour duration each)

Eighty (80) percent of the credits in each course shall be evaluated on the basis of an end-term examination consisting of theory examination of two hours and practical examination of 2 hours.

² To be approved by University Authority

A combination of theory part and practical part examinations may be held on same day or may be formulated for separate dates for convenience by Examination branch in consultation with the Course Coordinator.

FACULTY

1. University may appoint visiting faculty with teaching experience in RS & GIS or appoint guest (two) faculty members with M. Tech. in Remote Sensing & GIS or M. Tech. Geoinformatics as per University rule to share and support in running the course.
2. Remunerations for visiting faculty or guest faculty for teaching will be as per University rules.

Course Structure:

The course shall be spread over 2 (two) semesters with weightage (contact hours) of 5 hours for each paper per week. The structure of the course shall be as follows:

Semester I

| Course No | Course Title | Marks | Remarks |
|-------------|------------------------------------|-------|-----------|
| GEOINFO-601 | Principles of Remote Sensing & GPS | 100 | T-50+P-50 |
| GEOINFO-602 | Fundamentals of GIS | 100 | T-50+P-50 |
| GEOINFO-603 | Cartography & Geo Statistics | 100 | T-50+P-50 |
| GEOINFO-604 | Geosciences & Image Interpretation | 100 | T-50+P-50 |
| GEOINFO-605 | Computer Programming | 100 | T-50+P-50 |

Semester II

| Course No | Course Title | Credits | Remarks |
|-------------|---|---------|-----------|
| GEOINFO-606 | Digital Image Processing | 100 | T-50+P-50 |
| GEOINFO-607 | Spatial Analysis & Modeling | 100 | T-50+P-50 |
| GEOINFO-608 | Project | 100 | 100 |
| GEOINFO-609 | Geoinformatics in Agriculture, Soil & Land Evaluation | 100 | T-50+P-50 |
| GEOINFO-610 | Geoinformatics in Regional and Urban Planning | 100 | T-50+P-50 |
| GEOINFO-611 | Geoinformatics in Water Resources | 100 | T-50+P-50 |
| GEOINFO-612 | Geoinformatics in Disaster Management | 100 | T-50+P-50 |

Note: Two papers from Course No: GEINFO 609 to GEINFO 612 will be opted.

SEMESTER-I

GEOINFO 601 PRINCIPLES OF REMOTE SENSING & GPS

UNIT 1: BASIC PRINCIPLES

- Remote Sensing: History, Development, Definition, Concept & Principles
- Electromagnetic Radiation (EMR): Spectrum and its properties, Atmospheric windows, Interaction of EMR with atmosphere & Earth's Surface
- Spectral signatures & Resolutions: Spatial, Spectral, Radiometric and Temporal
- Remote Sensing Systems: Platform, types of platforms & its characteristics.
- Sensor classification: Active and Passive, Optical-Mechanical Scanners & Push-broom scanners
- Thermal Infrared: Introduction, Radiation Properties, Kinetic Heat, Temperature, Radiant Energy and Flux, methods of transferring heat
- Thermal properties of terrain: Capacity, conductivity, Inertia, Infrared,
- Microwave: Passive & Active Sensors, RADAR, Scatterometer

UNIT 2: AERIAL PHOTOGRAPHY AND PHOTOGRAMMETRY

- Introduction: Fundamentals of Aerial Photography: flight planning & execution
- Photogrammetry: Basic concepts of measurements of object height and length,
- Stereo Photogrammetry: Stereovision & Stereoscopes, Stereoscopic Parallax & Parallax Equations
- Digital photogrammetry: Model deformation & Rectification, Relief displacement, Vertical exaggeration, Triangulation, Control & Mapping.

UNIT 3: REMOTE SENSING SATELLITES & SPECTRAL DATA ANALYSIS

- Satellites & their characteristics – Geostationary & Sun Synchronous
- Earth Resource Satellite: (Sun Synchronous) IRS, LANDSAT, SPOT, IKONOS, QUICKBIRD, MODIS, RADARSAT, ERS, CARTOSAT etc.
- Weather & Communication Satellites: (Geostationary) NOAA, TERRA, MOS, INSAT, GOES, etc.
- Spectral Signature and its Response: Soil, Vegetation, Rocks and Water bodies etc.,
- Ground Truth Verification:
- Remote Sensing Applications: Agriculture, Forestry, Water resources, Regional and Urban Planning

UNIT 4: GLOBAL POSITIONING SYSTEM

- Fundamentals of GPS and its applications
- Geodesy
- Components of global positioning system
- Factors affecting GPS accuracy
- GPS surveying methods and accuracy
- Reference station, reference equipments and radios

LAB WORK

- | | |
|------------|---|
| Exercise 1 | Test of Stereo Vision, computation of photo scales, Orientation of Stereo pair |
| Exercise 2 | Parallax bar handling and height measurements |
| Exercise 3 | Interpretation of satellite image for landuse/landcover, urban sprawl and slope mapping |
| Exercise 4 | Creating codes and attribute table in GPS |
| Exercise 5 | Data collection: Measurements, Line, Area Calculation |
| Exercise 6 | Data collection in DGPS mode. |
| Exercise 7 | Processing of GPS data in the software |

ESSENTIAL READING

GEINFO 602 GEOGRAPHIC INFORMATION SYSTEMS

UNIT 1: INTRODUCTION

- Basic concepts: Definition and history
- Components of GIS,
- Data structure and formats
- Spatial data models – Raster and Vector
- Data base design - editing and topology creation in GIS, Linkage between spatial and non spatial data
- Data inputting in GIS

UNIT 2: RASTER AND VECTOR DATA ANALYSIS

- Integration of Raster & Vector Data
- Cartographic Modeling - Map Algebra
- Raster Data & its Representation: Types, Data Structure, Data Compression, Data Files, Data Conversions
- Raster Data Analysis – Overlay Operations, Slope & Aspects, Statistical Analysis
- Geometric Transformations - Affine Transformation and Geometric Transformation Coefficients, RMS Error
- Vector data representation: Topological & Non-topological Vector Data, Map scale, Spatial Resolution, Spatial Data Accuracy, Location Data Accuracy and Precision, Vector Data Sources
- Comparison between Raster & Vector Data
- Feature Based Topological functions: Buffering Overlay Analysis, Distance Measurements
- Layer Based Topological Functions

UNIT 3: DATA EXPLORATION & DATA INTEGRATION

- Interactive Data Exploration, Vector Data Query, Attribute Data Query
- Logical Expressions, Types of Operations
- Relational Database Query: Use of SQL, Descriptive Statistics of Attribute Data
- Spatial Data Query, Raster Data Query, Query by Cell Value, Query using Graphical Methods, Charts
- Geographic Visualization, Data Classification, Spatial Aggregation, Map Comparison
- Problem Identification & Designing a Data Model

UNIT 4: APPLICATIONS OF GIS

- Application of GIS Techniques in Various Fields
- Web GIS

LAB WORK

- | | |
|------------|---|
| Exercise 1 | Data Organization (location, attributes, consistency, scale) |
| Exercise 2 | Spatial and Non Spatial data collection, representation and standardization |
| Exercise 3 | Graphical Representation of Spatial data (Raster/Vector Method) |
| Exercise 4 | Overlay Analysis, data Linkage for Analysis |
| Exercise 5 | Relational Data Base Query |

GEOINFO 603 CARTOGRAPHY & GEOSTATISTICS

UNIT 1: BASIC CONCEPT OF CARTOGRAPHY

- Introduction to cartography: nature and scope
- Approximation of Earth, Introduction to Geometrics.
- Categories & Characteristics of maps, Study of different types of maps, Survey of India national series maps Interpretation of topographic maps,
- Basics of Map scales.
- Reference and coordinate system
- Indexing and Numbering of topographical maps

UNIT 2: DESIGN ISSUES

- Fundamentals of Cartographic Design, colour, pattern, lettering, compilation, border information, aesthetics
- Generalization: Semantic & Geometric, symbolization, dot, isopleth and choropleth mapping,
- Multivariate and dynamic mapping,
- Map production, methods of map printing
- Visualization of geospatial data: Design aspects, Multiscale and geometric aspects scale, dissemination of (visualized) geospatial data, Graphic Symbolology & Variables.
- Data products, use and users of products
- 3D Visualization, Various issues in map visualization, Interactive Cartography

UNIT 3: DIGITAL MAPPING, DATA STRUCTURE AND LAYOUT

- Digital Cartography - Elements of digital Cartography
- Analog to Digital Conversion of Data.
- Conventional mapping VS Digital Mapping
- Nature of Data, Database and Data structures,
- Data Input: data capture, digitization and scanning,
- Digital database creation : Point features, Line features, Polygon features
- Data Editing-Removal of errors – Overshoot & Undershoot, Snapping
- Data Collection and Integration, Non-spatial data attachment working with tables
- Dissolving and Merging

UNIT 4: ELEMENTARY STATISTICS

- Data base query: Reclassification, overlay cross tabulation, editing, assigning attribute values, extraction of attribute values, histogram, area and perimeter calculation, profile generation, probability classification.
- Mathematical operations: Image overlay, scalar image operations, image attribute transformation.
- Distance operators: Distance analysis (spherical distance, cost distance), buffer analysis, direction variable cost distance, dispersion distance, least cost path analysis, spatial allocation and reallocation, Thiessen Polygon.
- Context operators: Surface analysis, filtering pattern analysis, grouping watershed, determination, hinterland determination.
- Statistics: Regression analysis (multiple, logistic, pattern analysis, trend surface analysis, spatial auto correlation, quadrant analysis, weighted mean, centre/ standard radius, compaction index, sampling (random, systematic and stratified), standard scores method.

LAB WORK

Exercise 1. Construction of different types of scales: Simple, Comparative, Diagonal Scale.

Exercise 2. Construction of different types of map projection: Conical projection, Cylindrical Projection ,

Zenithal Projection

Exercise 3. Preparation of UTM grid

Exercise 4. Preparation of Base Map

Exercise 5. Designing, Symbolization, Pattern and Shading techniques

ESSENTIAL READING

GEOINFO 604 GEO SCIENCES & IMAGE INTERPRETATION

UNIT 1: THE EARTH SYSTEM

- Concept of Earth System, Lithosphere, Biosphere, Hydrosphere & Atmosphere
- Elements Of Photo Interpretation In Geological Studies- lithotypes and structural features

UNIT 2: IMAGE INTERPRETATION

- Visual and Digital Satellite Image Interpretation
- Elements of Image Interpretation
- Development of Interpretation Keys
- Ground Truth Verification

UNIT 3: GEOMORPHOLOGY & LANDFORMS

- Fundamental Concepts: Geomorphic Agents and Processes
- Development of Drainage Patterns and their Significance.
- Image Characteristics of Major Landforms: Fluvial, Aeolian, Glacial and Marine

UNIT 4: OPERATIONAL APPLICATIONS

- Natural Hazard Risk Management.
- Regional & Urban Planning
- Agricultural , Soil and Land Evaluation
- Water Resources

LAB WORK

- | | |
|------------|--|
| Exercise 1 | Tracing of Details From Stereo Pair |
| Exercise 2 | Interpretation of Satellite Imagery in different Bands |
| Exercise 3 | Interpretation of Thermal Image and Drawing of Isotherms |
| Exercise 4 | Identification of different Features using TM, FCC and Thermal Imagery |
| Exercise 5 | Identification of Cultural Details from Satellite Imagery |

ESSENTIAL READING

GEOINFO 605 COMPUTER PROGRAMMING

Unit 1: Basics of Computer Hardware, Numerical Systems, Basic Programming (10 hrs)

Introduction to Computers

- Essential PC hardware, peripherals and software, Data storage and manipulation
- Computer configurations including PCs, terminals & workstations for networks to serve large and small businesses. Broad introduction to the main types of software.

Data Communications

- Introduction to Networks
- Star and Bus LAN topologies;
- Central and distributed computing;
- Wide area and global networks;
- The World Wide Web; Using the Internet and email effectively.

Unit 2. HTML Programming: (5 hrs)

HTML Elements

<HEAD>,<TITLE>,<BODY>,<P>,
,<CENTER>,<DIV>,<BLOCKQUOTE>,<PRE>,,<BASEFONT> Lists (,,), HR,Text formatting elements(<I>,,<U>,<STRIKE>)

Address Element

Links and Addressing

Linking basics: HREF, NAME

Images and Anchors: ,image alignment, Plug-Ins Using <EMBED>, Scrolling with <MARQUEE>

Text Alignment, Tables and Fonts

Word Hinting <NOBR>,<WBR> Specific to Netscape <SPACER>,<MULTICOL>

Unit 3. C++ Programming: (10 hrs)

Introduction to Algorithms, C Fundamentals, I/O functions, Control Statements and C Preprocessor Definition of Program & Algorithm, Pseudocode, Flowchart, Implementation of algorithms

C Fundamentals: The C character set, identifiers and key words, Data types, constants, variables and arrays, declarations, expressions, statements, symbolic constants, Operators and Expressions, Arithmetic operators, unary operators, relational, logical and bitwise operators, assignment operators, library functions.

I/O functions: Preliminaries, getch, getche, getchar, putchar, scanf, printf, gets, puts. Control statements: Preliminaries, while, do.. while, for, if..else, switch, break, continue, goto statements.

The C Preprocessor: Macro Expansions.

Functions, Storage Classes, Arrays and Pointers

Functions: A brief overview, defining a function, accessing a function, passing arguments to a function, specifying argument data types, function prototypes, recursion, call by value, call by reference.

Program Structure: Storage classes, Automatic, Register, External, Static Variables.

Arrays and Pointers : Defining an array, processing an array, passing array to a function, multidimensional arrays, arrays and strings, pointer declarations, passing pointer to a function, pointer and one dimensional arrays, Operation on pointers, pointers and multidimensional arrays.

Unit 4. Visual Basic Programming: (10hrs)

Creating Working Directory, Project, Forms, Module, Project window, Object, Event.

Controls & Properties : PictureBox, Label, TextBox, Frame, CommandButton, CheckBox, OptionButton, ComboBox, ListBox, HScrollBar, Timer, DriveListBox, DirListBox, FileListBox, Shape, Line, Image, Graph, Mhstate, Outline and their Corresponding Properties

Basic Programming Building Blocks : Variables, Data types, Logical testing, Arithmetic and Relational Operators, Branching with if, Select Case, GoTo, For...Next, Do Loops, While... Wend, Arrays(ReDim), On...GoSub, On...OnGoTo, InputBox, MsgBox, InputBox, String Functions like Space, Space\$, Str, Str\$, Len, Trim, Ltrim, Rtrim, Trim\$, Mid, Mid\$, Left, Left\$.

Procedures: Procedures (Sub and Fun), Attaching an Event procedure to a Form or Control, Creating a General procedure.

Testing & Debugging: Errors & Watches, Error Trapping

Unit 5. Relational Database Management System (RDBMS): (8 hrs)

Introduction: Introduction to databases, characteristics of the database approach, database users and designers, role of a DBA, advantages of using a DBMS, data models, schemas, instances, DBMS architecture (Three-Schema Architecture)

Conceptual Data Modeling: Phases of database design, entity type, entity set, attributes, keys, value sets, relationships, relationship types, relationship sets, relationship instances, relationship degree, role names, recursive relationships, constraints on relationship types, attributes of relationship types, weak entity types, ER Diagram, naming conventions and design issues.

LAB WORKS

Lab 1. Introduction to computers & programming concept

Programming in 'C' Language

Lab 2. Programming using concepts of Variables, Operators

Lab 3. Programming using Control Structures

Lab 4. Programming using Functions and Arrays

Lab 5. Programming using Strings

Lab 6. Programming using Data Structure

Lab 7. Programming using File Handling

Programming in 'C++' Language

Lab 8. Programming using concepts of Control Structure, Function & Arrays.

Lab 9. Programming using Classes

Lab 10. Programming using concept of Inheritance

Essential Readings

- Byron S. Gottfried, *Theory and Problems of Programming with C*, Tata McGraw Hill Publication
- E. Balaguruswamy, *Programming in ANSI C*, Tata McGraw Hill publication
- Jeffrey P. McManus, *DataBase Access with Visual Basic 6: The Authoritative Solution*, Tech Media, Sams Publishing.
- Paul Sheriff's *Teaches Visual Basic*, Prentice, Hall India.
- R.Elmasri, S.B Navathe, *Fundamentals of Database Systems*, Addison, Wesley

SEMESTER-II

GEOINFO 606 DIGITAL IMAGE PROCESSING

UNIT 1: INTRODUCTION

- Concepts about digital image and its characteristics
- Spectral, Spatial, Radiometric and Temporal resolution
- Visual vs. Digital methods, Image data storage and retrieval
- Image restoration and Noise Abatement , Radiometric and Geometric correction technique
- Interpolation methods – linear and non linear transformation for geometric corrections

UNIT 2: IMAGE ENHANCEMENT & FILTERING TECHNIQUES

- Look-up Tables (LUT) and Types of image displays and FCC
- Image Enhancement Techniques: Radiometric and Spatial
- Contrast stretching: Linear and non-linear methods
- Spatial Filtering: High and Low frequency, Image smoothing
- Accuracy Assessment, Error Matrix

UNIT 3: MULTI-BAND ENHANCEMENT TECHNIQUES & CLASSIFICATION

- Band ratio, Types of Vegetation indices
- Principal Component Analysis, Multi dated data analysis and Change detection
- Digital Image Classification: Supervised & Unsupervised

UNIT 4: PATTERN RECOGNITION

- Concept of Pattern Recognition, Multi-spectral pattern recognition
- Spectral discrimination, Signature bank, Parametric and Non-Parametric classifiers
- Kriging

LAB WORK

- Exercise 1 Import / Export of files using DIP Software
- Exercise 2 Geo-reference of the Toposheet and imageries
- Exercise 3 Display, Analysis and interpretation of Imageries
- Exercise 4 Performing contrast enhancement techniques, Filtration: High, Low frequency
- Exercise 5 Sub-setting of area of interest from the satellite image
- Exercise 6 Principal Component Analysis
- Exercise 7 Classification: Supervised, Unsupervised
- Exercise 8 Mosaic of Images
- Exercise 9 Map composition

ESSENTIAL READING

GEOINFO 607 SPATIAL ANALYSIS & MODELING

UNIT 1: INTRODUCTION TO GIS ANALYSIS AND MODELING

- Spatial Data: Definition, Analysis, Processes & Steps, Software and Tools
- Raster-Based and Vector-Based GIS Modeling, Binary Models, Index Models, Regression Models, Process Models
- Geodatabase Model, Role of Databases in GIS, Creating, Editing and Managing

UNIT 2: SPATIAL DATA ANALYSES TECHNIQUES

- Classification Scheme of Vector-Based and Raster-Based GIS Operations
- Raster-Based Techniques: Methods of Reclassification, Overlay Analysis, Slope and Aspects, Buffering, Cost-Distance Calculation
- Vector-Based Techniques: Map Manipulation Techniques, Buffering, Overlay Analysis, Network Analysis
- Digital Terrain Analyses and Modeling: TIN and DEM, Surface Representation & Analysis

UNIT 3: GEOSTATISTICAL ANALYSIS TECHNIQUES

- Introduction to Spatial Interpolation: Control Points
- Global Methods: Trend Surface Analysis, Regression Models
- Local Methods: Thiessen Polygons, Density Estimation, Inverse Distance Weighted Interpolation
- Kriging: Ordinary Kriging (Semivariance, Semivariogram), Universal Kriging,

UNIT 4: INTRODUCTION TO DSS

- GIS and decision support system, Introduction to decision making process and decision support systems, Introduction of a frame work for planning and decision making, Spatial Decision Making
- Development of DSS, DSS Architecture
- Principles and components of multiple-criteria decision making
- Main multiple-criteria evaluation methods/techniques
- Spatial multiple criteria decision making
- Multiple-criteria decision making in spatial data analysis
- Introduction to AHP, Basic Principles of AHP
- Effect Table, Pair Wise comparison, Standardization, Consistency, Wiegthage, performance score, Different method in PWC

LAB WORK

- Exercise 1 Creating conceptual models - Site Suitability Model.
- Exercise 2 Representing features in Raster data set
- Exercise3 Creating TIN surface from vector/ raster data,
- Exercise 4 Monitoring of forest fires using DSS
- Exercise 5 Spatial Multi Criteria decision making for site selection

ESSENTIAL READING

GEOINFO 608 PROJECT

The subject/topic of the Project Work, related to the problems will be allotted to each student in the beginning of the IInd Semester. The students, in consultation with their respective supervisors, may give their choice of preference of problem /topic / area. However, the decision of the Head/Course Coordinator shall be final. Each student will be required to work independently on the problem assigned including literature consultation, data collection, fieldwork and/or training, laboratory investigations, report writing etc., under the guidance of his/her supervisor. The students will have to submit to the department three typed (bound) copies of his/her work, in the form of Project Report. After the evaluation, a copy of which will be returned to the concerned supervisor and the student separately.

The Project topic should consist of the following:

- Problem identification and its aims and objectives,
- Review of Literature,
- Data acquisition and Collection,
- Methodology,
- Analysis and Result.

Presentation:

On satisfactory completion of the project, each student is required to defend his/her thesis through a PowerPoint presentation in front of an external expert and faculty and students which will be followed by Viva-Voce. This should be a substantial piece of research work, which both reinforces the skills learned in the taught component of the course and provides a genuine opportunity to undertake valuable research.

GEOINFO 609 GEOINFORMATICS IN AGRICULTURE, SOIL & LAND EVALUATION

UNIT 1: ESTIMATION & SPECTRAL ANALYSIS OF CROPS AND DAMAGE ASSESSMENT

- Spectral Properties of Crops and Yield Parameters
- Identification of Crops and Acreage Estimation.
- Vegetation Indices
- Production Forecasting through Digital Analysis
- Monitoring, Condition, and Damage Assessment
- Detection of Pests and Diseases
- Damages due to Droughts and Floods
- Water-logging and Salinity, Stress Detection.

UNIT 2: SOIL CLASSIFICATION & MAPPING

- Soil Types in India
- Soil Survey Methods, Soil Classification
- Problems with Soil Identification
- Mapping of Soils using RS and GIS techniques.

UNIT3: LAND EVALUATION & ASSESSMENT

- Land Evaluation,
- Role of Remote Sensing in Soil Conservation.
- Principle and Methods of Land Assessment
- Agriculture and Soil Development
- RS & GIS in Land Evaluation

UNIT 4: CASE STUDIES

- GIS for Drawing out Action Plans & Recent Development in Agro- Climatic Modeling
- Watershed Planning, Remote Sensing in Agriculture & Soil studies

ESSENTIAL READING

GEOINFO 610 GEOINFORMATICS IN REGIONAL AND URBAN PLANNING

UNIT 1: BASIC CONCEPT

- Importance & Relevance of Remote Sensing data for Urban and Regional Planning
- Visual and Digital Data Analysis Techniques
- Scale and Resolution concepts
- Scope and Limitations of Remote Sensing Application to Urban and Regional Planning.

UNIT 2: REGIONAL AND URBAN PLANNING

- Urban and Regional Mapping
- Base Map Preparation, Regional, City, Intra –City,
- Scale & Methodology
- Urban and Regional Plan Formulation
- Application of Remote Sensing Techniques in Regional Plan, Master Plan,

UNIT 3: URBAN ANALYSIS

- Urban Analysis, Urban Growth
- Trend Analysis, Change Detection
- Slum Development, Housing Typology and Density Analysis, Population Estimation
- Information system
- Database Organisation- Large Scale Data Entry
- Interpretation Manipulation- Retrieval- Attribute Information for Urban Planning

UNIT 4: CASE STUDIES

- Analysis of Urban Land Use Change
- Preparation of Master Plan in City Development
- Object-oriented GIS Data Modelling for Urban Design
- Delineation of socio-infrastructure database into GIS for land use planning

ESSENTIAL READING

GEOINFO 611-GEOINFORMATICS IN WATER RESOURCES

UNIT 1: BASIC CONCEPT

- Hydrologic Cycle, hydrological parameters,
- Watershed characterization, delineation and codification
- Watershed problems and management strategy
- Geoinformatics approach for watershed prioritization
- Drainage Morphometric Analysis

UNIT 2: REMOTE SENSING IN SURFACE-SUBSURFACE WATER EXPLORATION

- Application of remote sensing in hydrogeomorphological interpretation for ground water exploration
- Water quality monitoring through remote sensing
- Geophysical Methods for Groundwater Exploration.

UNIT 3: OPERATIONAL APPLICATIONS IN WATER RESOURCES

- Flood Prediction, Drought Evaluation
- Snow Cover Mapping
- Reservoir Sedimentation Evaluation.
- Geoinformatics Based Runoff & Hydrological Modeling
- Flood Hazards Modeling, Snowmelt Runoff Modeling.

UNIT 4: CASE STUDIES

- Hydrogeomorphological Mapping in Plateau Region
- Flood Prone Zone Mapping in Indo Gangetic Plains
- Water Harvesting Initiatives in Urban Built Up Lands
- Drought Assessment in Jharkhand.

ESSENTIAL READING

GEOINFO 612 GEOINFORMATICS IN DISASTER MANAGEMENT

UNIT 1: INTRODUCTION

- Hazards and disasters, their types, and characterization
- Zonation of hazards, natural and human induced disasters
- Disaster and National losses, historical perspective of disasters in India.
- Fundamental concept of Disaster Management
- Government, NGOs and peoples participation disaster management
- Existing organization structure for managing disasters in India
- Geoinformatics in disaster mitigation.

UNIT 2: HAZARDS

- Landslide, Earthquake
- Mining hazards (Land subsidence, Mine flooding etc.)
- Volcanic hazards, Groundwater hazards, Glacial hazards
- Flash floods, River floods
- Dam burst, Cloud burst
- Cyclones, Coastal hazards and Drought
- Forest hazards (Deforestation, Degradation and Forest fire)
- Land & soil degradation, Desertification
- Pollution (Water, air and soil)

UNIT 3: GEOINFORMATICS APPLICATIONS:

- Geoinformatics models in managing forest fires, floods, landslides, cyclone and earthquake mapping.

UNIT 4: CASE STUDIES

- Earthquakes in India
- Floods in Indo Gangetic plains
- Landslides in Himalayan region
- Drought in Indian plateau regions.
